Examiner D. Herrera
Art Unit 3617

In the Abstract:

Please substitute the following new Abstract:

ABSTRACT OF THE DISCLOSURE

A method in wireless communication devices, for example, a cellular handset, including receiving a network control message, forcing an active packet session into a dormancy state in response to receiving the network control message, suspending a dormancy timer after receiving the network control message, and starting the dormancy timer upon completion of an event, for example, a voice pre-emption, that precipitated suspension of the active packet session.
